 arthurhottier

Final-year engineering student at Télécom Paris, passionate about extending the impact of frontier AI through reliable agentic systems and workflows deployed across real-world organizations.

EDUCATION

Diplôme d'Ingénieur

Sep. 2023 – Jun. 2026

Télécom Paris, Institut Polytechnique de Paris

- Focus on artificial intelligence, machine learning, applied mathematics, and probabilistic modeling.
- Languages: French (native), English (C1, TOEIC 900), German (A2).

Classes Préparatoires MPSI / PSI

Sep. 2021 – Jun. 2023

Lycée du Parc, Lyon

- Conducted a TIPE project combining linear regression, dimensional analysis, and machine learning to recover physically consistent laws for acoustic overpressure.

EXPERIENCE

Incoming AI Engineer & Chief of Staff to the Head of AI

Starting Sep. 2026

Onepoint – AI Office, Paris

- Selected for a hybrid role combining AI engineering and operational support to the Head of AI.

Data Scientist Intern

Feb. 2026 – Present

LFB Biomedicaments – Industrialization Group Division

- Developed a YOLOv8 model for automated detection and classification of industrial process anomalies.
- Built a graph-based memory system and web platform for enterprise deviation management.
- Modeled ion-exchange chromatography processes using applied mathematics.
- Offered a full-time position to lead digital transformation for LFB's new manufacturing site in Arras.

Director of Operations

Jun. 2025 – Present

Télécom Business & Finance, Télécom Paris

- Organized and led workshops and talks on algorithmic trading, consulting, and finance careers.

SELECTED PROJECT

Self-Hosted AI & Homelab Infrastructure

2025 – Present

Independent project – LLM Inference, Proxmox, GPU Virtualization, PBS

- Built and operate a Proxmox homelab for deploying self-hosted applications, and AI inference services.
- Deployed a 35B open-weight LLM on an NVIDIA RTX 5090 using llama.cpp and Unsloth Studio.
- Optimized long-context and concurrent LLM inference through quantization and KV-cache tuning.
- Built and open-sourced OpenCode Team Studio, a visual management interface for agentic development workflows, including specialized agents, skills, MCP integrations, permissions, and configuration backups.

Hermes Agent Platform

2026 – Present

Independent project – Hermes Agent, MCP, Agentic Workflows

- Deployed and customized Hermes Agent as a persistent AI workspace for software engineering.
- Integrated command-line tools, and MCP services to automate multi-step development workflows.

SimTrading Ecosystem

Jan. 2025 – Present

Personal project – Python, TypeScript, Next.js, PostgreSQL, Prisma, Docker

- Built SimTrading, a web platform for configuring trading strategies and running backtests.
- Developed and published *simtrading-engine* on PyPI, the Python framework powering strategy execution, portfolio simulation, orders, fees, leverage, and PnL calculations.
- Extended the platform into a multi-service ecosystem integrating market-data ingestion, strategy execution, real-time trading bots and monitoring interfaces.
